CLEANING INSTRUCTION AND MAINTENANCE

WAVE fluted acrylic sheet comes protected with a high-quality protective film which is only removed at the completion of all installation work. After the protected film is removed, there is still presence of solvent from the adhesive coating of the protective film on the surface of the high gloss fluted acrylic sheet. An electrostatic charge is built-in and attracts dust onto the surface of the panel. During this time, the fluted acrylic sheet surface also cures out under the influence of normal air humidity. Under normal circumstances, the 'Curing' process will take approximately 72 hours for the surface to be totally cured. In order to speed up the process, We recommend cleaning the high gloss surface with COLIN Glass cleaner and soft Micro Fibre cloth.

WARNING

DO NOT use any of the following cleaning products.

- Alcohol-based cleaners
- Solvent-based cleaners
- Petrol, pinewood or oil based cleaners
- Cloth other than a micro fiber

Shake it well and
