REASONS FOR AIR BUBBLE FORMATIONS ON ACRYLIC SHEETS

To avoid de lamination / air bubbles in between ply and laminate the above steps should be taken care of. Bonding of acrylic sheets shouldn't be completed under high humidity

Acrylic are bonded in extremely humid conditions

Debonding in certain areas because of uneven substrate surface

Use of water base Resin adhesive or any other PEVA (Polyethylene Vinyl Acetate Co-polymer)

Insufficient or lack of pressing during the bonding period of laminate

When substrate loses moisture after installation

Use of extremely large acrylic / PVC laminate sheets (more than 8 ft x 2 ft long)
